

# Flow Monitor

## RVM/UM

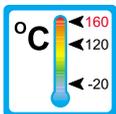

### Operation

The flow monitors type RVM/UM operate with the float measuring principle

### Application

The flow monitors type RVM/UM are used for monitoring volumeflow of liquid media.

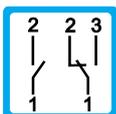

Areas of application:

– Coolingsystems and cooling-circuits

– Mechanical Engineering  
e.g. Weldingmachinery,  
Laserplants

– Research and development

### Features

The RVM/UM series proves itself through reliable function and easy handling. Further characteristics of this sturdy type are:

- universal mounting
- high switch accuracy
- high flowrate at low switch-point
- EX-version to ATEX available
- high pressure resistance
- Threaded connection  
Special threads on request

### Installation hints

The installation of the flow monitor can be done in any way in the system. The flow direction must be observed.

The flow monitor must not be used as a supporting part in a pipeconstruction!

The medium must not contain any solid particles!  
We recommend the installation of strainers type SFD or SFM.

External magnetic fields influence the switch contact. Keep adequate distance to those magnetic fields (e.g. electromotors)!

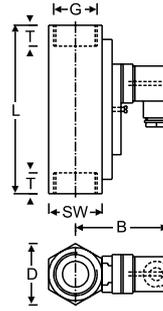

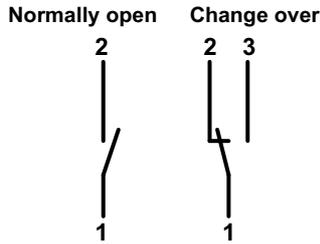

The operating instruction for RVM/UM must be observed under any circumstances!
